EDUCATION

University of Toronto

Candidate for Bachelor's Degree, Computer Science

Apr 2028

cGPA: 3.98/4.00

EXPERIENCE

Shopify

Incoming Software Engineer Intern

Toronto, ON

Jan 2027 – Apr 2027

University of Toronto

Software Engineer

Toronto, ON

May 2026 – Present

- Shipped features across three departmental web platforms: Courseography (Haskell, **750+ users** monthly), CAVE (TypeScript/React, 100+ users), and IQBank (React/Node, 300+ users), for course-prerequisite visualization, software-design practice, and exam preparation
- Built and maintained a quality pipeline with Jest and Coveralls, creating over **500+ automated tests** on CircleCI by applying test-driven development (TDD) and using Claude to speed up production
- Owned a matching exercise end-to-end, from Figma to implementation and testing, to teach clean architecture
- Reduced wall-clock runtime by **5.1%** by adopting DevOps practices and reconfiguring GitHub Actions (CI/CD)

The Matter Lab

AI Research Assistant

Toronto, ON

May 2026 – Aug 2026

- Built an evaluation harness to benchmark code-generation agents on HPC GPU nodes, looking at several metrics to compare efficiency using **MCP** tool calls in **Python** for the El Agente: Grafico with Prof. Alán Aspuru-Guzik
- Implemented a geospatial agent with pydantic-ai that turns live open data into map-based insights
- Designed a command validation layer and summary-based result store decoupling context cost from result size

PROJECTS

Agentic AI Travel App | *React Native, TypeScript, Google APIs, Gemini*

Mar 2026

- Built a cross-platform mobile app that adapts travel itineraries from user energy check-ins and location context
- Created an agentic pipeline that evaluates user state, filters nearby options via the Google Maps SDK, and recommends alternative activities with reasoning and directions for mental health awareness
- Integrated the Gemini API to generate personalized itineraries from mood and wellness data persisted in Supabase

Instrument Classification ML Model | *pandas, NumPy, PyTorch, Google Colab, Kaggle*

Feb 2026

- Built and trained a convolutional neural network (CNN) that classifies musical instruments across 18 categories
- Engineered an end-to-end data pipeline that cleaned raw Kaggle .wav files and generated structured .csv metadata
- Improved classification accuracy from **56% to 96%** through hyperparameter tuning and audio data augmentation, using GPU-accelerated training in Google Colab

LEADERSHIP EXPERIENCE

Computer Science Student Union @ UofT

Academic Associate

Sept 2025 – May 2026

Toronto, ON

- Taught peers core data structures and algorithms in Python through presentations and coding examples
- Solved coding problems in real time by optimizing algorithms and Object-Oriented Programming (OOP)
- Organized weekly LeetCode Nights for 50+ students in collaboration with IEEE UofT and UTMIST

ACHIEVEMENTS

Fermat Math Contest (2024) | *Top 1% among 19,000+ contestants internationally*

University of Waterloo

Canadian Girls' Math Contest (2024) | *3rd place, Senior Division*

CGMC

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, C/C++, JavaScript, SQL, Haskell, HTML/CSS

Frameworks & Libraries: Node, React, React Native, Flask, Expo

ML / AI & Database: MySQL, PyTorch, pandas, NumPy, Matplotlib, PostgreSQL, MongoDB, SQLite

Other Technologies: Docker, Git/GitHub, Jest, SLURM/HPC, Google Colab, Figma, Hugging Face, UNIX/Shell
